

Project Summary

QPSE provided preliminary front end engineering and design (pre-FEED) and engineering, procurement, and construction management (EPCM) to UGI for a 34.26-mile, 20-inch natural gas pipeline, as well as two new local distribution interconnects and an interconnect at the Sunbury Power Plant. This was UGI's first FERC 7(c) project. The line originates in Lycoming County, Pennsylvania, and flows southwest, terminating in Snyder County, Pennsylvania. As estimated, the line moves 196 MMscfd. The new pipeline and interconnects are capable of transporting natural gas, and are under the estimated \$160,000,000 budget.
